Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Burnham et al. (3365009).

Burnham et al. disclose a drilling system comprising: drilling means 11; pumping means 74 during drilling; a drilling fluid outlet system 10, having unidirectional chokes 18, 20 for the return flow of retrieved drilling fluid; and alternating means for alternating the flow direction through the choke means (since valve 43 is a one-way check valve, flow can alternate by moving from right to left through valve 18, through valve 30 then into pipe 36).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3637

Claim 5 rejected under 35 U.S.C. 103(a) as being unpatentable over Burnham et al. in view of Gipson et al. (6119779).

Burnham et al. disclose the invention substantially as claimed but not an accumulator.

Gipson et al. present a drilling fluid outlet system 10 with an accumulator 18.

It would have been obvious to a person having ordinary skill in the art at the time the invention was made to include an accumulator in the Burnham et al. system, as presented by Gipson et al., in order to collect sand (Gipson et al., col. 2, lines 12-13).

Allowable Subject Matter

Claims 9-12 are allowed.

Claims 2-4 and 6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

Applicant's arguments filed 16 March 2007 have been fully considered but they are not persuasive. The examiner contends the limitations of claim 1 are anticipated since the means allowing flow in both directions through the bladder valve has been established. The examiner agrees Burnham et al. is silent as to backwashing the bladder valve, however, the valve system disclosed is capable of allowing flow toward check valve 43. Further since no pressure parameter has been set forth in claim 1, as argued at the bottom of page 7, the examiner considers the Burnham et al. structure capable of bi-directional flow.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
